GLOBAL SALMON INITIATIVE: OPENING DOORS TO ACCELERATE PROGRESS

The GSI Sustainability Report marks a major milestone for the salmon farming industry and its commitment to transparency. The report provides a unique opportunity to access data from 13 salmon farming companies' global operations, all reporting against the same 15 metrics, year-on-year.

48%

of members' production ASC certified in 2021

More responsibly raised salmon farmed to the highest environmental standards

9

years of improving eco-efficiency of feed ingredients

Innovation and diversification in resources from utilizing novel sources like algae, as well as responsible use of certified marine ingredients

salmon that's raised to be better

A skilled global network

A skilled global network dedicated to sharing knowledge and innovations

data points reported against 15 indicators across 13 GSI member companies over 9 years

GSI is the only place to find consistent salmon farm reporting at a global industry level

There are always areas we can improve, because good is never good enough.

Here's where we will be focusing efforts in the coming year:

Continuing to grow our ASC certification levels

Reducing the use of antibiotics

Reducing salmon mortality rates

As we continue on our journey to catalyze sustainability improvements at speed and scale, we use this annual report to benchmark progress and see where we can make strides in farming salmon that's raised to be better for climate, oceans and communities.
